

# Restaurant Reservation

## Introduction:

Whenever we go to restaurant with our family or with friends we face the situation that the restaurant is fully reserved. Although the reservation took place on a telephonic call, but the problem is that the other person who did not know about this reservation what he will do if he reaches to a restaurant and doesn't find a seat for his friends or family.

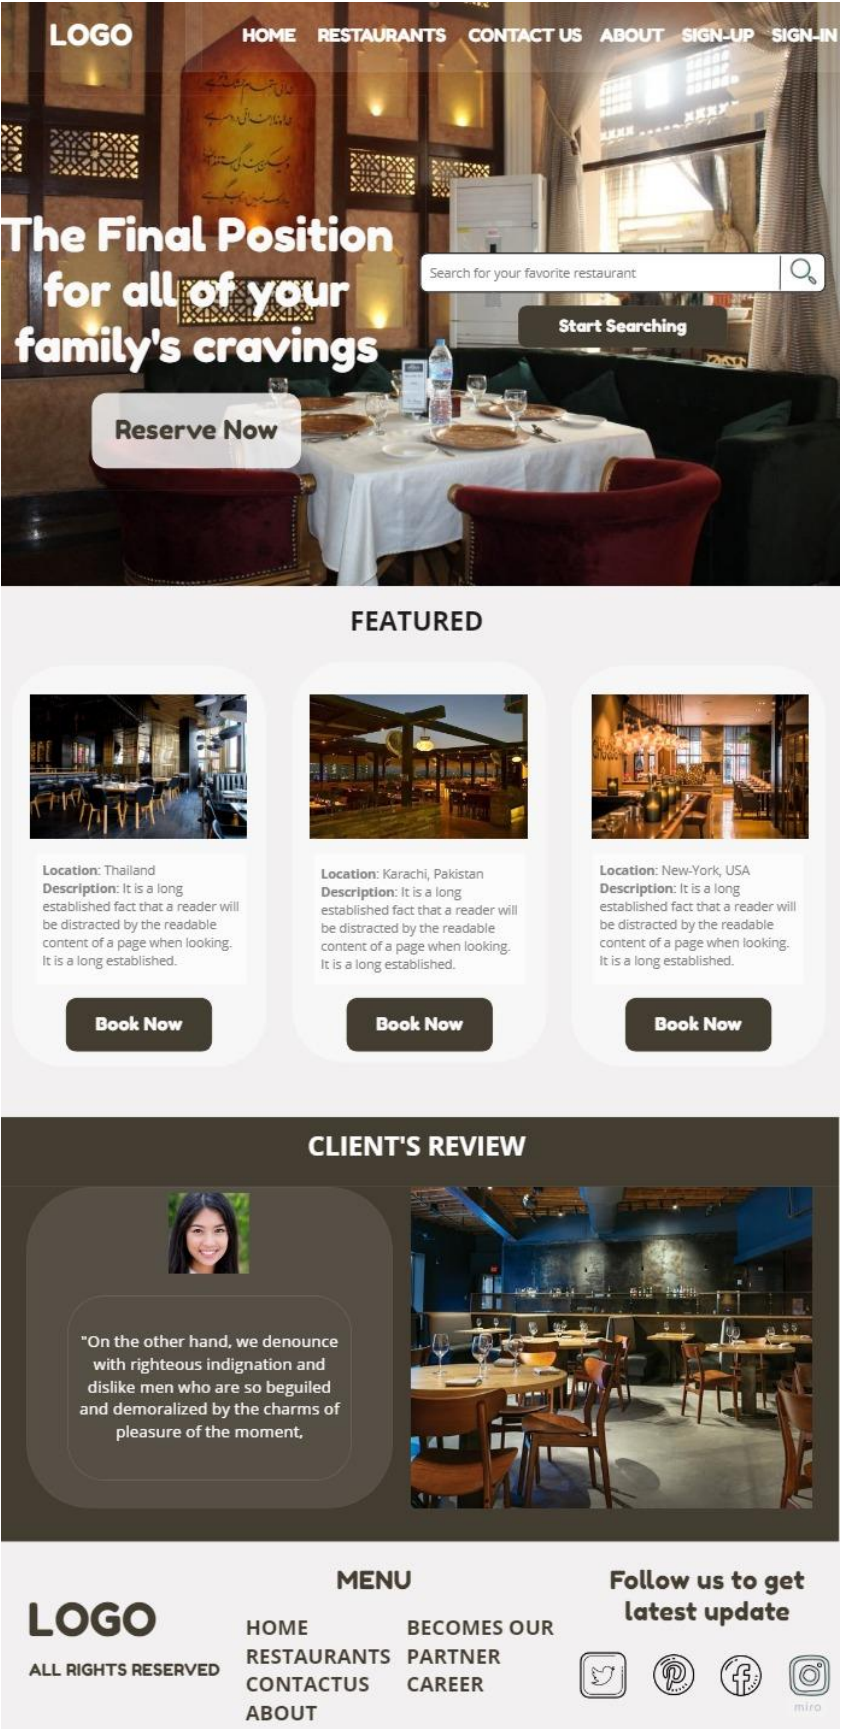

So my idea is about to build a restaurant reservation system through which all people can observe either a seat is available or not. And reserve their favorite place to sit.

The company which owns this application should charge some subscription charges to every restaurant listed in this application. An advertisement will be made for those restaurants who paid for it. By doing so this application could become the hub of all restaurant reservation around the globe. Through these activities company can generate easy capital.

## Features:

- A proper database system in which the data of all restaurant can be added (location of google map, address, phone number, cell number, etc)
- A special place for paid restaurant clients for their advertisement.
- A seat reservation system through which a remote person can see which seats are available in a particular restaurant.
- A top view picture of each restaurant dining area so that a person choose his favorite seat location.
- A marketing campaign feature for restaurants who paid for it.
- A sign in option separate for the user and separate for the customer owner or manager.
- A small CMS system for customer owner or manger so that they can create their digital reservation system look good.
- A calendar, time and number of people for restaurant reservation.
- Search bar for filtering restaurant in a particular area.
- Customer reviews for the restaurant after availing their services
- Restaurant match according to your favorite dish.

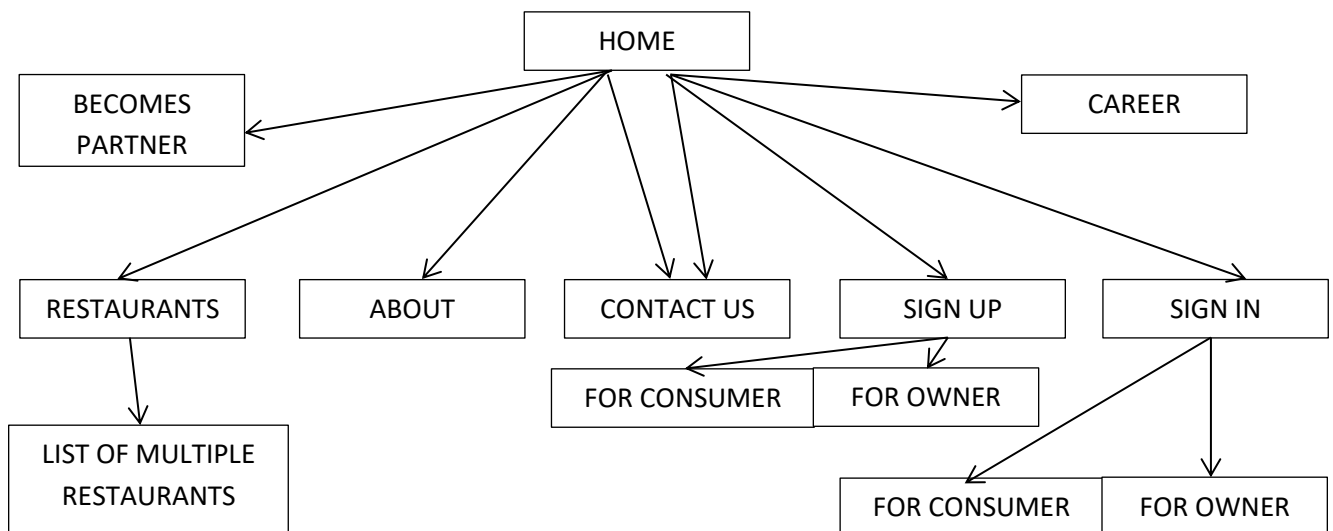

# User Interface Design

## Relation with proposed features:

- Has a special place to contain featured restaurants to give them a shout out.
- A marketing campaign feature for restaurants.
- Customer reviews for the restaurant after availing their services
- Search bar for filtering restaurant in a particular area.
- A sign in option separate for the user and separate for the customer owner or manager.
- A seat reservation system through which a remote person can see which seats are available in a particular restaurant. This view can be seen if a person clicks on a particular restaurant.
- A calendar, time and number of people for restaurant reservation. This will be available when a person clicks on a restaurant picture to avail their services.
- A top view picture of each restaurant dining area so that a person chooses his favorite seat location. This will be available when a person clicks on a restaurant picture to avail their services.

## Navigation Structure:
